## **Computerway Announces Guru Availability**

*Extract customized data from any CFS Progress-based application*

**HIGH POINT, NC — November 5, 2008** — Computerway Food Systems introduces its long anticipated report creation software, Guru Report Writer. Guru is a user-friendly GUI software program that enables users to easily create custom reports on the fly, extracting real-time production and inventory data from any CFS Progress-based application. Guru can also report on third party data sources that are connected via the Progress Data Server. Report criteria, also known as “queries,” may be saved to be updated with real-time data. One click opens the report in Excel to add colors, fonts, graphics, and charts that are automatically updated whenever the report is requested.

“Guru allows any company to quickly and easily add to the library of hundreds of standard CFS reports, based on their specific needs at any given moment. These saved reports can then be added to any CFS application menu to allow authorized individuals to access only the data they need,” said Bill Altenpohl, President and CEO of Computerway Food Systems.

Founded in 1986, Computerway Food Systems is located in High Point, N.C. The company offers two major product lines, Computerway, computerized production and inventory control systems for food production and processing plants, and Chickway, electronic weighing systems designed for high speed sorting on overhead conveyors.
