Computerway Announces R6e Availability

Production and Inventory Control system designed specifically for the Egg Industry

HIGH POINT, NC — January 12, 2009 — Computerway Food Systems introduces the newest version of its popular Production and Inventory Control software, this version written specifically for the Egg Processing Industry. The new system processes all information in real-time and can be used to improve ROI in areas such as Labeling, Palletizing, Inventory Management, Shipping & Scanning, and Tracking of Packaging Materials. R6e can be interfaced with Computerway's Quality Control, Process Tracking, and virtually any ERP or accounting system.

“R6e follows our proven modular system design and allows producers to select any combination of operating methods to match their market needs and the requirements of specific facilities.” said Bill Altenpohl, President and CEO of Computerway Food Systems.

Founded in 1986, Computerway Food Systems is located in High Point, N.C. The company offers two major product lines, Computerway, computerized production and inventory control systems for food production and processing plants, and Chickway, electronic weighing systems designed for high speed sorting on overhead conveyors.
